

MORROW

High Speed and Carbon Twist Drills

*A Web of
Graduated
Thickness*

Strength where strength is needed is furnished by a web of graduated thickness, an indication of the scientific and practical designing applied to Morrow High Speed and Carbon Twist Drills.

These dependable, efficient drills are made from hammered steel bars and are specially Morrow tempered, and fully warranted. Strong, trustworthy drills that give more holes with less regrinding and duplicate exacting work accurately.

For your customer with a problem, Morrow experts will demonstrate these drills in the customer's shop or plant on difficult work.

Morrow Carbon Drills are made from Sheffield (England) steel.
